Folding Walls

A new layout in **less than no time**

Rearrange your space quickly. That's possible with Haro folding walls from Multiwal. For more than 40 years, Multiwal Haro folding walls have been making it easy and cost-effective to use space flexibly. In exactly the way you want it.

Multiwal Haro folding walls are distinguished by their stability and ease of use. And they can provide not only the perfect visual division but also excellent soundproofing. That means that Haro folding walls from Multiwal can be used practically anywhere – in both commercial and residential buildings. Multiwal is Europe's largest producer of Haro folding walls, with satisfied customers all over the world.

Multiwal Haro folding walls also make it possible to make optimal use of small spaces.

Haro 24

The **most** frequently sold wall world wide

Conference hall or meeting room, theatre or sports centre:
Multiwal Haro folding walls are everywhere. And with good reason.
Just look at their main features:

- The standard built-in hook closer ensures a good seal.
The Harpo lock is available as an optional extra.
- You can lock the wall in the open as well as the closed position.
- The restraint for fixing the wall is automatically in the open position.
- All visible metal parts are finished in satin anodised aluminium.
- The inner frame is hot-dip galvanised and consists of scissored elements linked to each other by rods, creating an extremely solid construction.
- The heavy-duty leatherette cladding is dirt-repellent, washable and self-extinguishing. The fabric does not shrink or stretch, so that the pleats remain straight and smooth.
- Floor rails are not necessary, which means that the floor covering can be laid without interruption.

And these extras complete the picture:

- You gain extra space with an end section at right angles to the main track. The open folding wall can then be folded parallel to the room wall.
- When fitted with rotating hinges, the folding wall can be led through any bend with a radius of more than 70 cm.
- The fixed wall attachment can be replaced by an extra front upright with a lock.
- The Harostop restraint enables you to secure the front upright in any position, even in the parked position.
- Felt draughts strips fitted to the top and bottom of the folding wall optimize the seal

Folding walls have **unlimited options for use**

Multiwal Haro folding walls have been specially developed for the most diverse applications. Whether in hotels, retirement homes, apartments or utility buildings, Multiwal Haro folding walls can be found everywhere. Besides the excellent features of the Haro 24, Multiwal Haro folding walls also offer many extras, such as Harocoustic soundproofing.

Technic in **detail**

General characteristics

Nowadays, with silence becoming a rare commodity, the carefully tested features of the Haroacoustic folding walls are being appreciated more and more. For good acoustic insulation, special attention is paid to the way in which the folding wall is attached to your room walls, ceilings and floors. In addition, Haroacoustic has special sealing profiles, and the inside of the folding wall is covered with acoustic materials.

Haroacoustic folding walls are available in two designs, each with their own specific features.

- Type A 21 dB
- Type A1 29 dB

Average soundproofing between 100 and 3200 Hertz (Rw).

Harostop

Haroacoustic folding walls have a double harpoon latch, called Harostop. The walls can be attached with the Harostop at the location of your choice – also, therefore, in the restrained position. The front upright has this lock built in as standard, supplied with rubber caps.

To ensure our quality standard, Multiwal is certified according to quality management system DIN EN ISO 9001 : 2008 ISO.

Furthermore: the following certificates are available:

- Sound insulation according to DIN EN 10140-2/ 20140-3, laboratory values by international testing laboratories.
- Fire resistance according to EN 1364-1: 1999 and EN 1634-1: 2008
- TÜV-certification, durability test, construction test, ball-proof test according to DIN EN 60335-1, DIN EN 60335-2-103 and EK5/TA9 16-01:2016
- FSC®-certification number SGSCH-COC-050184

FSC® certified

FSC®, The Forest Stewardship Council®, is an international organisation, founded in 1993, to promote responsible forest management. The FSC® establishes worldwide standards for forest management, with a quality mark attached to it. The basis for these standards, which are further elaborated per country or region, are the 10 FSC® principles for good forest management. If forest owners adhere to the FSC® standards, their forest can be certified. Independent inspectors monitor compliance with the rules.
